What's the difference between Adobe Photoshop and Adobe Photoshop Elements? Adobe Photoshop offers its customers very powerful features, such as layers, vector drawing and photo editing. You can even use photogrammetry in Photoshop to make 3D models. However, it's not easy to use for casual users, which is why Photoshop Elements was released. Adobe Photoshop Elements is perfect for casual image editing and web design. It contains every feature from the professional version plus many

more, including watermarking and image repair. You can personalize your photo slideshow with frames, animations and picture collages. You can even make amazing 3D models in 3D Studio Max. It's quick and easy to use Photoshop Elements. All you need to know is just a little bit, and you'll be able to edit your photos like a pro. A detailed explanation of the differences between Photoshop and Photoshop Elements is included below. When can I use Photoshop? Adobe Photoshop is used by

many professionals, graphic designers, photographers, web designers and many more. Every industry uses it. Many people prefer Photoshop for its powerful features, but that doesn't mean they can't learn Photoshop Elements. The difference is that Photoshop Elements is easier to use than Photoshop, and it's great for casual photographers. If you are very familiar with Photoshop and image editing, you don't have to feel overwhelmed. You can use Photoshop Elements for all your image

editing needs. You'll enjoy the features much more than Photoshop. What are some reasons why Photoshop isn't recommended for beginners? Adobe Photoshop is widely used in many professional industries, such as web designers, graphic designers and many more. Many professionals swear by it. If you're a professional web designer or a graphic designer, Photoshop is the most useful software. However, Photoshop has many powerful features, especially advanced features that most web designers and graphic

designers don't need. The fact is Photoshop is a great image editing software, but it's also intimidating for beginners. Therefore, Photoshop Elements is perfect for beginners. It contains the same powerful features as Photoshop but with a simple user interface. Unlike Photoshop, Photoshop Elements doesn't have so many features. Why should I use Photoshop Elements? You can use Photoshop Elements to edit images on a whole new level. You can personal

1489. 20 Id. at 893. Thus, as the Second Circuit has explained, if a subsidiary of a parent operates a ferry across a given body of water, the United States may be liable under the FTCA for a railway accident on the dock where the subsidiary boats dock, even though the railway company does not own or operate the dock. See id. at 893-94. Therefore, where the FTCA makes an entity responsible for its own negligence, even if it

is vicariously liable for the negligence of another, see section 1346(b), the concept of vicarious liability does not aid a plaintiff in seeking to hold an entity liable for the negligence of a parent. To the contrary, such vicarious liability can only "improve the plaintiff's chances," id. at 892-93, and thus "improperly undermines the principle" of sovereign immunity. Id. at 895. 21 This court has reached the same conclusion as to liability for injuries arising from activities of subsidiaries of foreign government

entities. For example, in United States v. Bedson Corp., 311 F.2d 164 (9th Cir. 1962), we held that the United States is liable under the FTCA for injuries resulting from faulty design of a parachute when the parachute was manufactured and assembled by a British corporation, which was wholly owned by the United Kingdom, and was operated on the Navy's behalf by a wholly owned subsidiary of the United Kingdom's foreign ministry. See id. at 165. We explained that the British subsidiary had a "

'financial interest' in the project as a whole," id. at 169, and that under 28 U.S.C. §§ 2671, 2674 and 2680(k) "[i]f the U.S. [was] liable for injuries 'caused by the employees of the U.K.... [such] liability would be a vicarious liability for the negligence of the U.K. in its 'employment' of the U.S. corporation...." Id. at 170. 22 Similarly, in Johnson v. Sawyer, 47 F.3d 716, 721-25 (5th Cir. 1995), the Fifth Circuit held that a United States Army helicopter was a "foreign state" within the meaning of 28

U.S.C. § 1605(a)(2) and that therefore the United States was immune from liability under the FTCA

Hydroacoustic acoustics (HAA) is a technique for measuring the characteristics of fluid flow through a conduit or the like. HAA is particularly suitable for measuring the characteristics of fluids for which visual observation is inconvenient or impossible.

For example, HAA can be used to measure the characteristics of fluids passing through pipes, tanks, holding tanks, or vessels which cannot be seen and/or are not easily accessible. One technique for measuring the characteristics of fluids in such flow systems (termed "fluid meters" herein) entails monitoring the noise that occurs in the fluid as it flows. There are three basic components of the noise associated with flow of a fluid in a pipe. First is acoustic noise, which is produced by the turbulence

of the flow. Second is coherent noise, which is noise due to acoustic energy traveling in some preferred direction, such as, for example, waves of oscillation (travelling wave), standing waves (staggered) and other waves which may be produced by the flow. Third is the background noise, which is the inherent noise within the fluid. The ratio of the amount of acoustic noise to the amount of coherent noise is a constant value for a given pipe flow rate and fluid type. Accordingly, use of the ratio of these

quantities over time can determine the characteristics of the fluid flowing in the pipe. Most of the work on HAA has been centered on the use of the ratio of acoustic to coherent noise. Studies have shown that the ratio of acoustic to coherent noise is related to the flow rate of the fluid in the pipe (Appl. Acoust., 1978, 15 (1) 19-28). Accordingly, the present HAA meter can be calibrated to the average flow rate of the fluid in the pipe. One such HAA meter, which measures the ratio of acoustic to

coherent noise, is disclosed in U.S. Pat. No. 4,250,917, which issued on Feb. 17, 1981 to D. G. Massie. HAA meters have been incorporated in flow systems where water is pumped through holding tanks or the like. Such systems typically include: a pump to move water from a supply tank to a holding tank, the system including a meter in the form of an HAA meter that provides an indication of the characteristics of the water in the holding tank; a solenoid valve that regulates the flow of water
